Nguyen Thi Phuong Anh

Backend Engineer / Software Engineering Student

github.com/alixblu
[linkedin.com/in/alixblu](https://www.linkedin.com/in/alixblu)
devpost.com/alixblu

Final-year Software Engineering student focused on backend development and cloud computing, with hands-on experience building and deploying applications. Seeking an internship, open to backend, cloud, and related roles, with the goal of contributing to scalable systems and further developing engineering skills.

SKILLS

Languages	Java, Python
Backend	Spring Boot, Django, REST APIs
Cloud & DevOps	AWS (EC2, S3, VPC, ECR, RDS, Bedrock), Docker
Databases	MySQL, PostgreSQL, MongoDB, SQL Server
Communication	English, Vietnamese (Native)

TECHNICAL EXPERIENCE

DEVOPS / CLOUD ENGINEER — Course Project

Mar. 2026 — Apr. 2026

Food Street Commentary WebApp

<https://foodstreet.alixblu.site>

<https://github.com/akira3175/BuocChanSoiDa.git>

Web application that automatically plays location-based audio narration in multiple languages for nearby food street points of interest, with integrated user and admin management system.

Tech Stack: Python, Django, AWS EC2, AWS ECR, AWS RDS, Docker.

- Designed and implemented CI/CD pipelines to automate build, testing, and deployment workflows.
- Deployed and managed cloud infrastructure using AWS EC2, ECR, Docker, and RDS.
- Handled project migration from local environment to cloud production deployment.
- Configured public domain access, networking, and service integration.
- Contributed to POI API integration and application logic flow.

TEAM LEAD / BACKEND DEVELOPER — Course Project

Oct. 2025 — Dec. 2025

Beauty Product Review Platform

<https://github.com/alixblu/review-platform.git>

Comprehensive beauty product review platform built with microservices architecture, featuring user authentication, product management, social interactions, and AI-powered chatbot assistance.

Tech Stack: Java, Spring Boot, Spring Cloud Gateway, PostgreSQL, Neo4j, Docker, AWS Cognito, AWS S3, AWS Bedrock.

- Led backend system architecture design and task decomposition for a modular, service-oriented application.
- Designed and implemented relational and graph database schemas using PostgreSQL and Neo4j.
- Developed RESTful backend services for authentication, product management, user reviews, and social interactions.
- Integrated AWS Cognito for authentication, S3 for media storage, and built a RAG chatbot powered by AWS Bedrock.
- Containerized services with Docker to standardize local development.

EDUCATION & CERTIFICATIONS

Bachelor of Science in Information Technology (Software Engineering), Saigon University

Expected Feb. 2027

AWS Certified Cloud Practitioner, Amazon Web Services

Jul. 2025

ACTIVITIES

AWS Cloud Club SGU

Nov. 2025 — Present

Core Team Member, Club President

Ho Chi Minh City, Vietnam

- Worked with the leadership team at AWS Cloud Club SGU to define technical direction and execute academic and community initiatives.
- Recruited, mentored, and coordinated a 14-member core team across engineering, content, and event operations.
- Organized AWS-focused workshops, technical talks, and hands-on labs for student developers.
- Designed structured learning programs covering AWS fundamentals, cloud architecture concepts, and real-world industry use cases.
- Collaborated with AWS Community Builders and industry speakers to expand students' exposure to cloud engineering practices.

Hackathon Participation

Mar. 2026 — Present

LotusHacks (Mar. 2026), Qwen AI Build Day (Apr. 2026)

Ho Chi Minh City, Vietnam

- Actively participate in enterprise-sponsored and international hackathons focused on practical software and AI-related problem solving.
- Built connections with peers across multiple IT majors, international participants, and startup builders.
- Explored real-world use cases through team discussions, rapid prototyping, and feedback from diverse participants.
